E-SHOP

e - Shop is a type of web application and it acts like a food delivery app which allows formal and informal merchants in the locals, to sell their foods on this application over the internet

The main activity of the app is to order the the food online, from this application and it also can do following functions from the home screen Browse through variety of food Filter the food list Sort the food list from ascending to descending or vice versa Search the food from Home Screen Browse through the different categories of food

The four specific functions that my app will do:
- Orders the food
- filters the restaurants
- searches the restaurants
- Delivers the food
